

26-01 : Job title: Systems Analyst

Job duties: Analyze and evaluate existing software and database management systems to assess system performance and optimization needs. Review information technology requirements, understand current coding structures, and conduct comprehensive testing to enhance system efficiency. Gather end-user requirements to design and implement software updates, patches, and installation processes for improved functionality. Develop and deploy computer applications to store, retrieve, and manage documents, data, and information, ensuring seamless integration with business processes. Create, modify, and test code, scripts, and forms to enable various applications to operate effectively. Document all aspects of application development, system modifications, and logical flow charts to facilitate future maintenance and upgrades. May need to work in other locations as required.

Requirement: Bachelor's degree (or foreign equivalent) in Computer Science, Computer Applications, Engineering, Information Technology, Information Systems, or related field.

Contact Person: Ankit Kohli, Chief Operating Officer, Imetris Corporation, 162 S. Industrial Drive, Saline, MI 48176.
